

Factsheet

Innovation

At Aeris, we look to find and develop potential where others may not. We're curious, resourceful and challenge assumptions. We surpass stereotypes. We're a modern mining company finding new solutions and making healthier choices for our environment and equitable futures.

We believe that through our people, our community, and the copper and gold we produce, we can contribute to something bigger than ourselves.

We have a strong appetite for innovation and finding new ways to identify and access resources, create a vibrant work environment, and transform traditional social and environment performance.

We embrace the fact that we have experienced hands working with new minds, and rise to the challenge together. While we are constantly looking for better ways to do things ourselves, we also partner with other companies from whom we can learn.

We embrace technology and innovation across our business which helps us step up, forward and keep reaching.

Exploration

- Smaller & more agile drill rigs like augers for lower impact.
- Blending quality geology with leading edge geophysics & applications finding new deposits.

Energy

- Battery Electric Vehicle Integrated Tool Carrier loader developed by 3ME and BattMobile Equipment in surface operations.

Mining Process

- Smart-choke to increase ventilation efficiency and effectiveness.
- Minnovare production drilling optimisation to reduce waste and accuracy.
- Tele-remote loader operations from vehicles or surface.

Social

- Industry leading rates of recycling, adding value to our community through reuse.
- Engagement and relationship development with heritage values of our Traditional Owners.

Landscape, footprint & legacy

- Reuse and encapsulation of waste rock into landforms.
- Site plant nursery to grow our own plants for revegetation and biodiversity.
- Use of a quality controlled CSG brine by-product to rehabilitate inherited legacy groundwater contamination.
