Key Milestones Achieved

We have achieved significant milestones and continued to advance studies and planning for the project.

The Stockman Project team has continued to make strong progress over the past year, advancing a range of studies and planning activities to support the future development of the project.

A key focus has been completing important feasibility work, including reviews of mining and processing plans, environmental management approaches, and infrastructure requirements. This work helps ensure the project is designed to meet current industry standards and reflects changing market conditions.

Recent updates to the project's [Mineral Resource and Ore Reserve estimates](#) have also reinforced the significant mineral potential of the Stockman Project. These updates incorporate the findings of recent technical studies, refinements to mine planning, and updated economic assessments.

Looking ahead, the team will continue to finalise the feasibility study by further refining engineering, mining and processing plans. This work will draw on the latest technical information and economic analysis to support future project decision-making. This ongoing progress represents another important step in advancing the Stockman Project and preparing for its next phase of development.

Regional Development Victoria Visits Stockman Project

Exploring opportunities for regional jobs, investment and long-term community benefits

Earlier this year, we welcomed David Roberts from Regional Development Victoria to the proposed Stockman Copper and Zinc Project following his attendance at a Community Reference Group meeting.

The site visit provided an opportunity to see the project firsthand and discuss its potential contribution to East Gippsland. Earlier in the day, Community Reference Group members received an update on studies currently underway, including refining the project design, updating costs and mining plans, and assessing market opportunities for pyrite.

As planning progresses, our focus remains on developing a project that supports local employment, meets environmental requirements, and delivers long-term

benefits for East Gippsland communities.

We thank David for taking the time to visit the project and for the ongoing discussions about the region's future.

Community Grants Program

Aeris Resources was pleased to support a range of community initiatives throughout the year.

We provided support to the Benambra Recreation Reserve to replace batteries and pads for their defibrillator, helping to ensure this important piece of emergency equipment remains operational for the community.

We also supported the Omeo Benambra Football Netball Club with the installation of a new ground sign around the football oval.

In addition, we continued our support of the Tambo Valley Races for the 2026 event which brings together residents and visitors from across the region and is an important part of the local community calendar.

Benambra School

We have continued our updates to the Benambra School this year, with external painting works now underway. The works are part of ongoing preparations for the future development of the Stockman Project, helping ensure key infrastructure is maintained and ready to support project activities.

Community Reference Group

In March, we held a Community Reference Group (CRG) meeting.

The CRG and its members serve as a vital link between the community and the Project, helping to understand and address local issues.

Members were happy to hear from Cam Schubert, Chief Technical Officer, and Stefan Edelman General Manager Corporate Development who gave an update on our current priorities including revising the mining plan with updated metal prices, improvements at Benambra School, and our Community Grants Program.

Below is a list of CRG members and their contact email addresses. Members can be contacted to communicate queries to the Stockman Project team.
